To provide a foundation for NATO’s JISR ambition, the Alliance is developing a JISR project aimed at providing the following pillars:

- **Training and education**: The personnel involved with the JISR capability in NATO will possess expertise to guarantee appropriate implementation. This area of the project examines ways to ensure that NATO personnel receive the highest standard of ISR training and education.

- **Doctrine and procedures**: To improve interoperability, efficiency, coherence and effectiveness, the JISR doctrine and procedures will be continuously developed and reviewed, from strategic thinking to tactical procedures.

- **Networking environment**: NATO CIS will guarantee efficient collaboration and sharing of the ISR data, products and applications between the Allies. This is the core business of NATO’s JISR initiative.

The JISR Workshop established milestones for the implementation of joint intelligence, surveillance and reconnaissance into the exercise programme and highlighted principal Training Objectives, which were mapped into exercise TRIDENT JUNCTURE 2015. The JISR implementation will enable future NATO commanders to have a far more informed assessment of what lies on the other side of the hill.
